1M

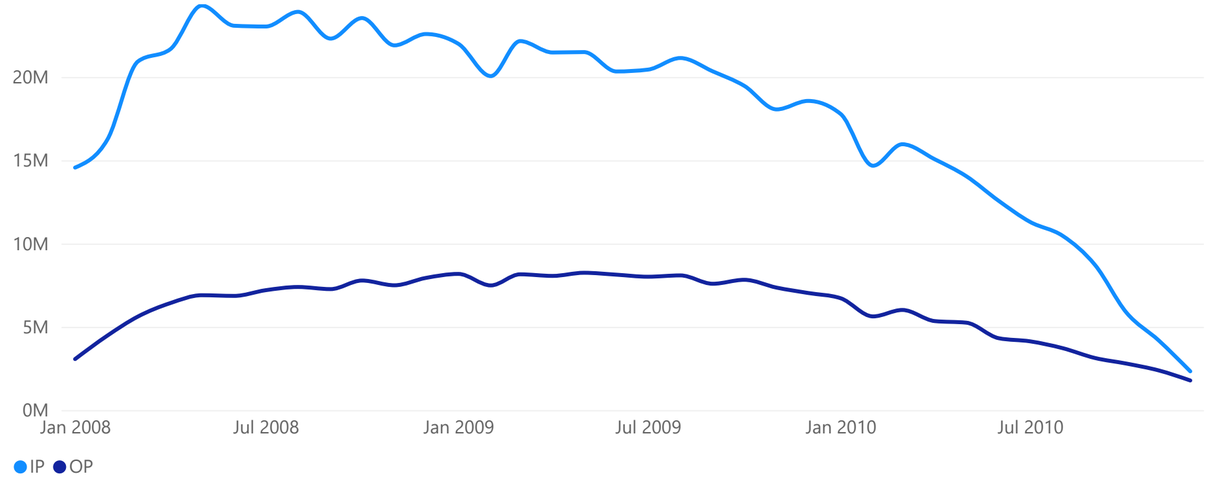

Spend rises with every chronic condition

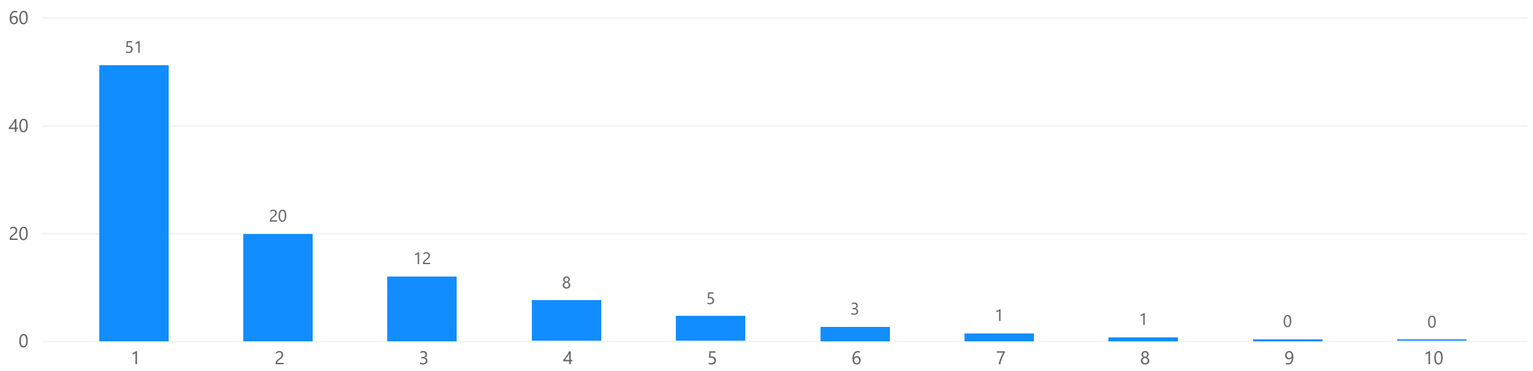

Inpatient is 8% of claims but 74% of spend

The 2010 decline appears in both claim types, likely a data artifact. by month and claim_type

Top 10% of patients drive 51% of spend

Providers billing well above peers (z ≥ 3)

Recommendation: Spend is driven by high-need patients (5+ chronic conditions, about $7K-$16K a year each), not billing anomalies. Prioritize care management for this group. **Caveats:** Synthetic CMS data (2008-2010). Outlier amounts are an upper bound and do not control for patient severity. The 2010 decline is likely a data artifact.
